

# User Guide Security Reference

## For RICOH IM 7000/8000/9000 Enhanced Security Firmware series

Author: RICOH COMPANY, LTD.

Date: 2020.12

Part Number: D0D07183

For information not found in this manual, see the online manuals available on our web site (<https://www.ricoh.com/>) or via the control panel.

# Configuring IPsec Settings

For communication security, this machine supports IPsec. IPsec transmits secure data packets at the IP protocol level using the shared key encryption method, where both the sender and receiver retain the same key. This machine uses automatic key exchange to configure the pre-shared key for both parties. Using the auto exchange setting, you can renew the shared key exchange settings within a specified validity period, and achieve higher transmission security.

## ★ Important

- When "Inactive" is specified for "Exclude HTTPS Communication", access to Web Image Monitor can be lost if the key settings are improperly configured. In order to prevent this, you can specify IPsec to exclude HTTPS transmission by selecting "Active". When you want to include HTTPS transmission, we recommend that you select "Inactive" for "Exclude HTTPS Communication" after confirming that IPsec is properly configured. When "Active" is selected for "Exclude HTTPS Communication", even though HTTPS transmission is not targeted by IPsec, Web Image Monitor might become unusable when TCP is targeted by IPsec from the computer side.
- If you cannot access Web Image Monitor due to IPsec configuration problems, disable IPsec in [Settings] on the control panel, and then access Web Image Monitor.
- For details about enabling and disabling IPsec using the control panel, see "Network/Interface", Settings.
- IPsec is not applied to data obtained through DHCP, DNS, or WINS.

## Supported operating systems

Operating systems	Note
<ul style="list-style-type: none"> <li>• Windows 7/8.1/10</li> <li>• Windows Server 2008/2008 R2/2012/2012 R2/2016/2019</li> <li>• macOS 10.12 or later</li> <li>• Red Hat Enterprise Linux WS 4.0</li> <li>• Solaris 10</li> </ul>	IPsec over both IPv4 and IPv6 can be used.

Some setting items are not supported depending on the operating system. Make sure the IPsec settings you specify are consistent with the operating system's IPsec settings.

# How to Read (Other than [Settings])

## Understanding headers

- User  
The user administrator has privileges for this operation.
- Mach  
The machine administrator has privileges for this operation.
- N/W  
The network administrator has privileges for this operation.
- File  
The file administrator has privileges for this operation.
- Unset  
The logged in user has privileges for this operation.  
In cases where no settings are selected in [Available Settings] of [Administrator Authentication Management].
- Set  
The logged in user has privileges for this operation.  
Status when settings are selected in [Available Settings] of [Administrator Authentication Management].
- Lv.1  
In cases where the [Menu Protect] setting is set to [Level 1].
- Lv.2  
In cases where the [Menu Protect] setting is set to [Level 2].

## Understanding the symbols

R/W: Executing, changing, and reading possible.

R: Reading is possible.

-: Executing, changing, and reading are not possible.

# IPsec Settings

IPsec settings for this machine can be made on Web Image Monitor. The following table explains individual setting items.

## IPsec settings items

Setting	Description	Setting value
IPsec	Specify whether to enable or disable IPsec.	<ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Exclude HTTPS Communication	Specify whether to enable IPsec for HTTPS transmission.	<ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul> <p>Specify "Active" if you do not want to use IPsec for HTTPS transmission.</p>

The IPsec setting can also be configured from the control panel.

## Encryption key auto exchange security level

When you select a security level, certain security settings are automatically configured. The following table explains security level features.

Security level	Security level features
Authentication Only	<p>Select this level if you want to authenticate the transmission partner and prevent unauthorized data tampering, but not perform data packet encryption.</p> <p>Since the data is sent cleartext, data packets are vulnerable to eavesdropping attacks. Do not select this if you are exchanging sensitive information.</p>
Authentication and Low Level Encryption	<p>Select this level if you want to encrypt the data packets as well as authenticate the transmission partner and prevent unauthorized packet tampering. Packet encryption helps prevent eavesdropping attacks. This level provides less security than "Authentication and High Level Encryption".</p>

Authentication and High Level Encryption	Select this level if you want to encrypt the data packets as well as authenticate the transmission partner and prevent unauthorized packet tampering. Packet encryption helps prevent eavesdropping attacks. This level provides higher security than "Authentication and Low Level Encryption".
--	--

The following table lists the settings that are automatically configured according to the security level.

Setting	Authentication Only	Authentication and Low Level Encryption	Authentication and High Level Encryption
Security Policy	Apply	Apply	Apply
Encapsulation Mode	Transport	Transport	Transport
IPsec Requirement Level	Use When Possible	Use When Possible	Always Require
Authentication Method	PSK	PSK	PSK
Phase 1Hash Algorithm	MD5	SHA1	SHA256
Phase 1Encryption Algorithm	DES	3DES	AES-128-CBC
Phase 1Diffie-Hellman Group	2	2	2
Phase 2Security Protocol	AH	ESP	ESP
Phase 2Authentication Algorithm	HMAC-SHA1-96/HMAC-SHA256-128/HMAC-SHA384-192/HMAC-SHA512-256	HMAC-SHA1-96/HMAC-SHA256-128/HMAC-SHA384-192/HMAC-SHA512-256	HMAC-SHA256-128/HMAC-SHA384-192/HMAC-SHA512-256
Phase 2Encryption Algorithm Permissions	Cleartext (NULL encryption)	3DES/AES-128/AES-192/AES-256	AES-128/AES-192/AES-256
Phase 2PFS	Inactive	Inactive	2

## Encryption key auto exchange settings items

When you specify a security level, the corresponding security settings are automatically configured, but other settings, such as address type, local address, and remote address must still be configured manually.

After you specify a security level, you can still make changes to the auto configured settings. When you change an auto configured setting, the security level switches automatically to "User Setting".

Setting	Description	Setting value
Address Type	Specify the address type for which IPsec transmission is used.	<ul style="list-style-type: none"> <li>Inactive</li> <li>IPv4</li> <li>IPv6</li> <li>IPv4/IPv6 (Default Settings only)</li> </ul>
Local Address	Specify the machine's address. If you are using multiple addresses in IPv6, you can also specify an address range.	<p>The machine's IPv4 or IPv6 address.</p> <p>If you are not setting an address range, enter 32 after an IPv4 address, or enter 128 after an IPv6 address.</p>
Remote Address	Specify the address of the IPsec transmission partner. You can also specify an address range.	<p>The IPsec transmission partner's IPv4 or IPv6 address.</p> <p>If you are not setting an address range, enter 32 after an IPv4 address, or enter 128 after an IPv6 address.</p>
Security Policy	Specify how IPsec is handled.	<ul style="list-style-type: none"> <li>Apply</li> <li>Bypass</li> <li>Discard</li> </ul>
Encapsulation Mode	Specify the encapsulation mode. (auto setting)	<ul style="list-style-type: none"> <li>Transport</li> <li>Tunnel</li> </ul> <p>If you specify "Tunnel", you must then specify the "Tunnel End Point", which are the beginning and ending IP addresses. Set the same address for the beginning point as you set in "Local Address".</p>
IPsec Requirement Level	Specify whether to only transmit using IPsec or to allow cleartext transmission	<ul style="list-style-type: none"> <li>Use When Possible</li> <li>Always Require</li> </ul>

	when IPsec cannot be established. (auto setting)	
Authentication Method	Specify the method for authenticating transmission partners. (auto setting)	<ul style="list-style-type: none"> <li>• PSK</li> <li>• Certificate</li> </ul> <p>If you specify "PSK", you must then set the PSK text (using ASCII characters).</p> <p>If you are using "PSK", specify a PSK password using up to 32 ASCII characters.</p> <p>If you specify "Certificate", the certificate for IPsec must be installed and specified before it can be used.</p>
PSK Text	Specify the pre-shared key for PSK authentication.	Enter the pre-shared key required for PSK authentication.
Phase 1 Hash Algorithm	Specify the Hash algorithm to be used in phase 1. (auto setting)	<ul style="list-style-type: none"> <li>• MD5</li> <li>• SHA1</li> <li>• SHA256</li> <li>• SHA384</li> <li>• SHA512</li> </ul>
Phase 1 Encryption Algorithm	Specify the encryption algorithm to be used in phase 1. (auto setting)	<ul style="list-style-type: none"> <li>• DES</li> <li>• 3DES</li> <li>• AES-128-CBC</li> <li>• AES-192-CBC</li> <li>• AES-256-CBC</li> </ul>
Phase 1 Diffie-Hellman Group	Select the Diffie-Hellman group number used for IKE encryption key generation. (auto setting)	<ul style="list-style-type: none"> <li>• 1</li> <li>• 2</li> <li>• 14</li> </ul>
Phase 1 Validity Period	Specify the time period for which the SA settings in phase 1 are valid.	Set in seconds from 300 sec. (5 min.) to 172800 sec. (48 hrs.).
Phase 2 Security Protocol	Specify the security protocol to be used in Phase 2.  To apply both encryption and authentication to sent data, specify "ESP" or "ESP+AH".	<ul style="list-style-type: none"> <li>• ESP</li> <li>• AH</li> <li>• ESP+AH</li> </ul>

	To apply authentication data only, specify "AH". (auto setting)	
Phase 2 Authentication Algorithm	Specify the authentication algorithm to be used in phase 2. (auto setting)	<ul style="list-style-type: none"> <li>• HMAC-MD5-96</li> <li>• HMAC-SHA1-96</li> <li>• HMAC-SHA256-128</li> <li>• HMAC-SHA384-192</li> <li>• HMAC-SHA512-256</li> </ul>
Phase 2 Encryption Algorithm Permissions	Specify the encryption algorithm to be used in phase 2. (auto setting)	<ul style="list-style-type: none"> <li>• Cleartext (NULL encryption)</li> <li>• DES</li> <li>• 3DES</li> <li>• AES-128</li> <li>• AES-192</li> <li>• AES-256</li> </ul>
Phase 2 PFS	Specify whether to activate PFS. Then, if PFS is activated, select the Diffie-Hellman group. (auto setting)	<ul style="list-style-type: none"> <li>• Inactive</li> <li>• 1</li> <li>• 2</li> <li>• 14</li> </ul>
Phase 2 Validity Period	Specify the time period for which the SA settings in phase 2 are valid.	Specify a period (in seconds) from 300 (5min.) to 172800 (48 hrs.).

# List of Operation Privileges for Address Books

## Understanding headers

- Read  
Users assigned with read privileges.
- Edit  
Users assigned with editing privileges.
- E/D  
Users assigned with edit/delete privileges.
- Full  
Users assigned with full control privileges.
- Entry  
Indicates a user whose personal information is registered in the Address Book. Also, it indicates any user who knows his or her user login name and password.
- User  
Indicates the user administrator.

## Understanding the symbols

R/W: Executing, changing, and reading are possible.

R: Reading is possible.

–: Executing, changing, and reading are not possible.
