

NIAP CY2022 2nd Quarter Progress

Product Validations

15 evaluations with 264 configurations added to the PCL

Evaluations by Technology

- Network Device (ND): 7
- Full Drive Encryption (FDE): 2
- Mobile Device Fundamentals (MDF): 2
- Application Software (APP): 1
- Hard Copy Devices (HCD): 1
- Peripheral Sharing Device (PSD): 1
- Operating System (OS): 1

Stakeholder Engagement

- **NIAP personnel spoke at Common Criteria Day and NSA's Commercial Solutions for Classified (CSfC) Conference on 9-10 May.** NIAP provided briefings on current activities and upcoming challenges.
- **NIAP attended the International Conference on the EU Cybersecurity Act on 24-25 May.** The EU is moving towards the implementing act for the European cybersecurity certification framework later this year. The conference focused on cloud and IoT technology challenges as well as the challenges of moving from a national certification scheme to an EU centric model. NIAP continues to track the impact to the CCRA and how to maintain mutual recognition agreements.
- **NIAP attended the RSA Conference 6-9 June,** running the booth on the expo floor and attending a variety of sessions to stay up to date on the latest technical and policy advances. Sessions focused on how the cybersecurity landscape has significantly changed over the course of the past year with an emphasis on supply chain management and Zero Trust.
- **NIAP published a multi-nation CC in the Cloud Position Statement –** NIAP has issued a joint endorsement statement with the Australian and Canadian schemes for the Technical Working Group's Essential Security Requirements document. NIAP is providing direct support to their continued efforts.

Protection Profile (PP) Development

PP Updates in Progress:

- Authentication Server PP-Module, Version 1.0
- Transport Layer Security (TLS) Functional Package, Version 2.0
- Mobile Device Fundamentals (MDF), Version 3.3
- Operating System PP, Version 4.3

PPs in Development:

- Software Defined Networking - Controller (SDN) PP
- Security Orchestration, Automation, and Response (SOAR) Platforms PP-Module
- Application Software collaborative Protection Profile (cPP)
- Privileged Access Management (PAM) PP
- Enterprise Management (EM) PP

PPs Published:

- Wireless Local Area Network (WLAN) Access System (AS) PP-Module, Version 1.0

Common Criteria Recognition Arrangement

- **Virtual CCDB Crypto WG meetings –** The WG continues its work to develop supporting documents for the Specification of Functional Requirements for Cryptography and the Evaluation Methodology of Cryptographic Functional Requirements. These supporting documents will support the harmonization of cryptographic mechanisms in cPPs and product evaluation for the CCRA. The WG has recently added 4 additional participants from the CCRA member nation of Turkey.
- **Attended CCDB and CCES virtual meetings, 17-19 May 2022 –** Engaged with CCRA nations on various topics regarding the maintenance and ongoing development of the Common Criteria (CC). Continued engagement with the Common Criteria Users Forum, ensuring regular collaboration between the 31 CCRA nations and industry.
- **Attended the Common Criteria Users Forum (CCUF) virtual Workshop, 18-19 May 2022 –** NIAP attended and participated in the bi-yearly CCUF workshop, representing the US as one of the largest certification bodies within the CCRA. The workshop allowed NIAP to engage with the CC community made up of vendors, labs, schemes, and academia to discuss baseline security requirements used in Protections Profiles, entropy, and other topics of interest.
- **Preparing for 21st International Common Criteria Conference (ICCC) November 2022.**
